MathML Torture Test

NOTES:

- Alternate stylesheets are available from: "View -> Use StyleSheet -> TeX | Mathematica"
- Click on a MathML fragment to view its WYSIWYG source.
- In the examples below, the text won't be allowed to decrease pass the scriptmsize or your browser's minimum allowable font size -- this can be set with [Tools -> Options... -> Content tab -> Fonts and colors -> Advanced button -> Minimal font size](#). To see the effect of the gradual decrease induced by changes in script levels more clearly, you may have to increase your default font size in the menu: [Tools -> Options... -> Content tab -> Fonts and colors, size](#).
 - Here is how the alphabet looks like at scriptmsize: $a, b, c \dots x, y, z$
 - Here is how greek letters look like at scriptmsize: $\alpha, \beta, \gamma \dots, \psi, \omega, \vartheta, \Upsilon, \varpi$
 - Here is how numbers look like at scriptmsize: $0, 1, 2, \dots, 10, 11, 12, \dots$
- You can use [View -> Zoom, Text Zoom only checked](#) in the usual way to zoom the MathML text along with the other text.
- There is a tracker bug where you can [report rendering errors on the demos](#).
